

Downloading and Understanding Ethiopian Regions Horses Data

Introduction

The datasets contain data about horses from the Ethiopian CSA Livestock reports and consists of national and regional statistics.

There are 11 regions in Ethiopia:

Name	Code used in data files
Addis Abada	AA
Afar	AF
Amhara	AM
Benshangul-Gumuz	BE
Dire Dawa	DD
Gambela	GA
Harari	HA
Oromia	OR
Southern Nations Nationalities and Peoples (SNNP)	SN
Somale	SO
Tigray	TI

The country of Ethiopia has the code: ETH.

Notes

- The field names are mostly self-explanatory, but more information is available in the Ethiopian CSA Livestock reports or from the GBADs Informatics team. Unless otherwise stated the unit is singular, e.g. horses_total is number of head
- The flag field in all tables is an integer that shows the status of a particular data point. The codes are as follows:
 - 0 = scraped from the Ethiopian CSA Livestock reports by the GBADs Informatics team (unaltered from the report)
 - 1 = data has been altered because the initial value in the CSA Livestock report table was wrong, but the data was recoverable from elsewhere in the report
 - 2 = data has been altered because the initial value in the CSA Livestock report table was wrong, but the data was not recoverable from elsewhere in the report and so has been estimated by the GBADs Informatics team in conjunction with Ethiopian experts

Horses Population Data

To download the horses population data for a region of Ethiopia or to access the national numbers, put the following in your browser:

<https://gbads-eth.s3.ca-central-1.amazonaws.com/CSA/horses-region-population.csv>

The file returned is a CSV with the following fields:

- region [codes listed above]
- year
- horses_total
- male_lt_3yrs
- male_gte_3yrs
- female_lt_3yrs
- female_gte_3yrs

Except for region (string), all fields are integer numbers. If the number is -1 it means that the number could not be estimated with confidence. Thus, all zeros are reported zeros.

Horses Estimation Data

To download the horses estimation data for a region of Ethiopia or to access the national numbers, put the following in your browser:

<https://gbads-eth.s3.ca-central-1.amazonaws.com/CSA/horses-region-estimation.csv>

The file returned is a CSV with the following fields:

- region
- year
- total_births
- male_births
- female_births
- total_purchases
- male_purchases
- female_purchases
- total_acquired_other
- male_acquired_other
- female_acquired_other
- total_sales
- male_sales
- female_sales
- total_slaughters
- male_slaughters
- female_slaughters
- total_offerings
- male_offerings
- female_offerings
- flag

Except for region (string), all fields are integer numbers. If the number is -1 it means that the number could not be estimated with confidence. Thus, all zeros are reported zeros.

Horses Health Data

To download the horses health data for a region of Ethiopia or to access the national numbers, put the following in your browser:

<https://gbads-eth.s3.ca-central-1.amazonaws.com/CSA/horses-region-health.csv>

The file returned is a CSV with the following fields:

- region
- year
- horses_death_disease
- horses_death_other
- total_deaths
- male_deaths
- female_deaths
- flag

Except for region (string), all fields are integer numbers. If the number is -1 it means that the number could not be estimated with confidence. Thus, all zeros are reported zeros.

Horses Holdings Data

To download the horses holdings data for a region of Ethiopia or to access the national numbers, put the following in your browser:

<https://gbads-eth.s3.ca-central-1.amazonaws.com/CSA/horses-region-holdings.csv>

The file returned is a CSV with the following fields:

- region
- year
- total_holding
- no_horses_holdings
- head_1to2
- head_3to4
- head_5to9
- head_gte_10
- flag

Except for region (string), all fields are integer numbers. If the number is -1 it means that the number could not be estimated with confidence. Thus, all zeros are reported zeros.

Horses Usage Data

To download the horses usage data for a region of Ethiopia or to access the national numbers, put the following in your browser:

<https://gbads-eth.s3.ca-central-1.amazonaws.com/CSA/horses-region-usage.csv>

The file returned is a CSV with the following fields:

- region
- year
- horses_total_gte_3yrs
- male_transportation
- male_draught
- male_other
- female_transportation
- female_draught
- female_other
- flag

Except for region (string), all fields are integer numbers. If the number is -1 it means that the number could not be estimated with confidence. Thus, all zeros are reported zeros.
